Front-End Developer with 2 years of experience specializing in React.js and Next.js. A disciplined and collaborative professional dedicated to building quality web applications and continuous technical growth.

WORK EXPERIENCE

Front End Developer, MindBot

September 2023 - Present

- Real-time IoT Monitoring Dashboard (Village Projects) Developed a real-time web application using React.js to monitor device statuses for residential village projects. The platform includes a comprehensive admin suite for project management and integrates the Google Maps API for geospatial project tracking.
 - Hotel Partnership Management System (Back-office) Developed a centralized back-office management system for hotel partners. Key features include managing hotel profiles, staff accounts, and amenities, as well as tracking and controlling IoT devices installed across various partner locations.
 - High-Risk Pregnancy Monitoring Dashboard Developed a medical monitoring platform using Next.js for nurses to track high-risk pregnancies. The system aggregates patient data collected via chatbot and visualizes it through Line and Bar charts, enabling healthcare providers to interpret complex health trends and provide timely care.
 - Psychology Day Interactive Website Developed an interactive website for a Psychology Day exhibition focused on suicide awareness. The platform facilitates user self-reflection and features integrated audio modules for listening to professional psychological insights.
 - Internal Management & Scheduling System Developed a back-office administration portal using React.js for managing schedules, customer data, and system administrators. Utilized Material UI (MUI) to build a streamlined, responsive component library, significantly improving development efficiency and UI consistency.
-
